## Safety Department

### SAFETY PERFORMANCE METRICS

The Safety Department monitors trends and responds to potential safety hazards in the workplace. The two industry standards utilized to measure safety performance include the DART and TCIR:

Use of the TCIR to report workplace injuries allow comparison of accident and injury statistics across industries, among industry segments, and from one year to the next. The DART rate is based only on those injuries and illnesses severe enough to warrant "Days Away, Restrictions and Transfers".

*\*As a general rule of thumb, you want to have a lower DART rate than the TCIR rate.*

TCIR = The Total Case Incident Rate calculated as:

*Total number of recordable injuries/illnesses x 200,000 / man-hours worked*

DART = Days Away Restricted Time calculated as:

*Total number of injuries/illnesses that result in Lost Time or Restricted Duty x 200,000 / man-hours worked*

Total Man-hours worked YTD (01/01/2017 – 06/30/2017): 682,982.50

Total Man-hours worked in June: 159,538.75

ALL Recordable injuries/illnesses YTD (01/01/2017 – 06/30/2017): 6

*\*All Lost Time, Recordable Injuries, & Restricted Duty cases*
