

Palisade Software Contract

Lance Cunningham, PhD | Dir Power Supply & Energy Risk

David L. Thompson | VP of Markets

Palisade Software

Background

- Power Supply began using the Palisade's software suite of products in October 2017, with a perpetual software license and annual maintenance.
- Palisade's software allows for modeling power supply costs utilizing a stochastic approach instead of utilizing a single deterministic method. Think of a "bell" curve instead of a single point.
- Palisade is changing their pricing structure to do away with perpetual licenses and moving to a subscription service with discounted incentives to existing customers to migrate to the new pricing structure, in exchange for a three year commitment.
- Pricing details are confidential from Palisade and will be discussed in the executive session.
